QUESTION 7 OF 10

Run a `mysql` container again, but this time map a volume to the container so that the data stored by the container is stored at `/opt/data` on the host.

Use the same name: `mysql-db` and same password: `db_pass123` as before. Mysql stores data at `/var/lib/mysql` inside the container.

Check

QUESTION 9 OF 10

Disaster strikes... again! And the database crashed again. But this time we have the data stored at `/opt/data` directory. Re-deploy a new mysql instance using the same options as before.

Just run the same command as before. Here it is for your convenience:

```
docker run -v /opt/data:/var/lib/mysql -d --name mysql-db -e MYSQL_ROOT_PASSWORD=db_pass123 mysql
```

Check

Next →

Task completed

Terminal 1

Terminal 2

+

Stop Lab

```
~ → docker run -v /opt/data:/var/lib/mysql -d --name mysql-db -e MYSQL_ROOT_PASSWORD=db_pass123 mysql
